General Comment

It's a cliché that humans are the most dangerous animals because of our intelligence. Unleashing something smarter than us without constraint is therefore incredibly dangerous. The U.S. seems to be against all regulatory efforts. Rejecting all regulation is just as dumb as supporting all regulation. Let's do the right thing and mitigate catastrophic consequences with regulations that prevent a misaligned, out-of-control intelligence. We should be focused on narrow AI in the short term. Let's not be blinded by the idea that if we don't build super intelligence someone else will (China is willing to cooperate on this issue) or that if we're the ones who build it then we'll be okay.
